

New Features of CadnaR 2.2

Calculation/Configuration

- particle model: maximum runtime specifiable

CadnaR Objects

- coloring of objects by using a formula (**Options|Appearance** menu)
- new object: symbol (for 2D and 3D symbols)
- new local libraries for 2D and for 3D symbols: enables to import 2D or 3D objects for display on the plan view (2D symbols) or in the 3D view (3D symbols)
- Transformation: new type „Interactive Transformation“ (via dialog **Modify Objects**)

Further New Features/Miscellaneous

- 3D View: room can be displayed using stereoscopic 3D view (for 3D TV sets or monitors)
- ObjectTree: objects and groups can be moved/copied using drag & drop
- cell list in the Plot Designer: cells and containers can be moved using drag & drop
- format of object tables editable

Import / Export

- ODBC import (**File|Database** menu)
- Import of **CadnaR** files via **File|Import** menu (with options for object type, import only section, etc.)
- ObjectTree: import from further **CadnaR** files possible

*Please note that some of the new features require the appropriate **CadnaR** option.*
